Hello Kush,

Extremely sorry for the delay in getting back to you, was stuck with few other tasks. Here is a simple rails task for you.

Task : Make a simple rails app to read a doctor profile json, example here (<https://www.healthlucid.com/api/xlucid-services/v1/physicians/5f1e7634.json>) and show a minimal web UI with that data. Something like a small github/facebook profile page, but much simpler.

You can consume any publicly available json data and make something cool with it. Your facebook profile/public tweets/github activity - whatever. I just gave an example.

Estimated time to complete - 5/6 hours

Points to consider:

1. Get the data with ruby, ajax requests to remote domains can be messy due to cross origin policies. Might be simpler.
2. Use ActiveResource gem to get the data. This is what we use at HL
3. Good if you can track your project with git and push it to github - we need git to work on a day to day basis but its ok if you don't know git for now.
4. Use twitter bootstrap for the UI or any CSS framework, you can save a lot of time.
5. You can use haml or erb for rails template.
6. All you need is 1 rails controller, 1 view and 1 model to get json data.
7. You don't need a DB, ActiveRecord etc.
8. Let us know how much time you took for this.
9. Embed a simple google map with the latitude longitude information if you get time.
10. Rails console might help a lot to analyze remote data returned from controller before passing it to view.

Hi Jaseem

Thanks for the assignment.

I have completed the assignment in ruby. I am doing it in rails. Its really a nice experience learning rails. I have also started learning about git.

I will send the completed assignment to you by tommorow morning (21 Jun 13)

Regards
